

MEMBRANE INSTALLATION CART

Polyguard offers a cart customized to assist in rapid installation of our highway and bridge deck membranes. These carts are adjustable for sizes from 12" – 48" width and are available for purchase and custom made to order.

The photo on the upper right shows how the cart works. The roll of membrane is placed on the top rail. Normally one employee gathers the release liner as the second employee rolls straight forward installing the membrane on the bridge deck or centered over the joint or crack.
