

UNDERSLAB TRM

WATERPROOFING SYSTEM: BELOW-GRADE SHEET MEMBRANE

Underslab TRM

Underslab TRM is a non-structural barrier which when properly constructed as part of the building envelope, it blocks both termites and water. Our premier product with superb puncture resistance and excellent resistance to lateral water migration. The primary use for 95-mil thick Underslab TRM is sheet-applied waterproofing under a below-grade slab or on-grade floor slab. Substrates for this application should be compacted soil, not greater than compacted #57's, round aggregate gravel, or a mud slab. It can also be used vertically in waterproofing of concrete walls over earth retention systems.
