

650 WRM

PRODUCT OVERVIEW

650 WRM is a strong, pliable, 60-mil, post-concrete pour self-adhesive waterproofing membrane/vapor retarder that virtually eliminates water and vapor transmission through concrete walls & slabs. 650 WRM is designed for use on foundation walls, mud slabs, sills and spandrel beams, tunnels, plaza decks, parking garages, and related applications where waterproofing is critical. It may also be used on wood or concrete block structures and insulated concrete forms (ICF). 650 WRM is available in 48"x 50' rolls.

- Winter installation in ambient and substrate surface temperatures of 10°F (-12°C) and rising.
- Strong, self-adhering sheet membrane with a thick, high strength, tough co-extruded backing.
- Outstanding Puncture Resistance: 2 times higher than the new AC 527 requirement when installed with our Polyflow® drain board as a system - Better protection against backfill damage.
- Superior Joints: Strong laps seams create a long lasting, water tight system - Outperforms the new AC 527 standard.
- Jobsite Adaptability: Flexible material that adapts to job site irregularities for ease of installation
- VERTICAL – designed for application to the exterior sides of vertical concrete foundation walls, tunnels, and related applications where waterproofing is critical.
- Can be utilized in the Dual Core System that capitalizes on both the advantages of a fluid-applied and sheet-applied membrane in a single system.
