

# Below-Grade Solutions

## Sheet-Applied Systems for Residential Walls

Compatible with Poured, CMU & ICF Surfaces

### Totalflow Drainage Board

high-capacity sheet molded perimeter drainage system constructed using a formed polymeric core designed specifically to transition water collected from sheet drains to an outlet drain.

### WM40

40-mil self-adhesive waterproofing membrane designed for ICF and concrete walls. It combines HDPE with rubberized asphalt for durability and resistance to water pressure.

### Polyflow® 10

Vertical drainage sheet that channels below-grade water and relieves hydrostatic pressure on foundations. It allows water flow while blocking soil to prevent clogging and also protects waterproofing membranes during backfill.

### Blue Barrier Gap Filler

Structural adhesive and sealant used to fill cracks and bond materials.

Seam Roller

Sausage Gun

Sausage Gun Tips

Sausage Gun Collar

### 650WB

Pink water-based, low-tack adhesive with low VOC. It prepares dry surfaces for proper adhesion of Polyguard waterproofing membranes.

### Totalflow™ End Outlet

Directs collected water from the Totalflow system into a 4" drain pipe for discharge to daylight. Used as a terminal outlet connection.

### Detail Tape

Flexible, self-adhesive HDPE and rubberized asphalt membrane. Used for sealing corners, joints, penetrations, and repairs in waterproofing systems.

### Totalflow™ Tee Outlet

Redirects water from the Totalflow system into a 4" drain pipe and allows an additional side connection, such as a trench drainage system.

### Construction Adhesive 343

This is a blue-tinted, fast-tack, fast-grab, low soak-in adhesive specifically formulated for bonding polyethylene and other difficult-to-bond surfaces.
