

End Outlet

Product Overview

Totalflow™ End Outlet is designed for transitioning and re-directing collected water from Totalflow to a hard pipe system for evacuation to daylight. It fits a standard 4" drain pipe. The End Outlet accessory is part of the Totalflow System which is a prefabricated, high-capacity sheet molded perimeter drainage system constructed using a formed polystyrene core, designed specifically to transition water collected from sheet drains to an outlet drain.

The End Outlet is part of our comprehensive set of drainage composites and accessories to manage the flow of water. Click the link below for the companion products used in conjunction with the End Outlet to complete the system.

Lightweight and easy to install

High capacity flow; 4 times the capacity of aggregate or sand

Relieves hydrostatic pressure

Compliments waterproofing system by removing water

Works as a complete system with Totalflow

Fabric ensures continued flow at the core

Takes the abuse of back-filling against your waterproofing

Fits a standard 4" drain pipe
